# I Executive Summary

PurpleMarket is a web application that will connect students, staff, and faculty from San Francisco State together via a virtual marketplace. In this marketplace, they will be able to communicate with each other, as well as buy and sell products on a user to user basis. There will be no intermediate and no surprises. What one user posts will be verified and will be exactly what is sold to another user. With this in mind we hope to create a safer, open community at San Francisco State, while also providing our users with a more convenient way to shop. The value of PurpleMarket is in its ability to provide an experience custom tailored to people associated with San Francisco State. Our vision is to provide a marketplace that facilitate the ability to sell and purchase the types of items and/or services that are most important to our users.

PurpleMarket plans to be easy to navigate, and easy on the eyes. There isn't any clutter which makes the site much more presentable to our users. Our users are presented with a clean design that will make it much easier for users to navigate our site to find exactly what they are looking for. If they have any trouble at all finding their specific product, they are able to narrow their search in three ways. The first method to finding their desired product is by browsing different categories. By providing categories that our users are most interested in, our users will be able to more easily sell or find the products that they want. The second method will be a simple and easy to use search that would allow the user to type specific titles, names, or descriptions where the user will be presented with the results of the search. Specific to the academic environment, the final method for finding a product is by finding products that are associated with a particular course. Once a user finds what they are looking for they can sign up and create a PurpleMarket account that will allow them to communicate with the user that listed the product directly on our site and the rest is history. So what about listing products? Any verified user who opens an account will be able to list a product. Finally, PurpleMarket will be able to facilitate on-campus meetings between buyer and seller, which simplifies the transaction experience.

Our team of passionate San Francisco State students know the frustrations of navigating online classifieds and the unique needs of the people associated with the school. It is because of this that we are exceptionally equipped to understand the San Francisco State community and provide them with the experience that they desire.

## II Main Data Items and Entities

**user:** The users are the people expected to use the web application. This entity will contain all the pertinent information that describes our user like their name, email address, and other identifying information.

1. user\_id: Primary key user identification
2. user\_first\_name: First name of user
3. user\_last\_name: Last name of user
4. user\_email: User's email

**item:** This entity are the items that are being bought, sold, or provided. This entity contains all the information that helps users find what they want. For example, this entity will have a name, a description, price, a category that it belongs to, and photos so that they can see what the item looks like.

1. item\_id: Primary key item identification
2. item\_name: Name of item
3. item\_desc: Description of item
4. item\_price: Asking price for item
5. item\_pic: Picture of item
6. item\_category: Category of item (e.g. furniture, books, etc)
7. item\_seller\_id: Id of the seller of the item

**category:** This is the category a particular item will belong to. For example, items may be furniture, books, electronics, etc. We want this data item to be easily changed or expanded if necessary in case our users find categories that they want.

1. cat\_id: Primary key for category
2. cat\_name: Name of the category (e.g. furniture, books, etc)

**account:** This will contain all the account information of our users as well as describe their permissions. This entity will contain the user's account password, the account type (e.g. Admin, Registered User, etc), and the permissions that are associated with the account type.

1. act\_id: Primary key account identification
2. act\_user\_id: User that this account is associated with
3. act\_username: Username for account
4. act\_pass: Password for this account
5. act\_role: Role associated with this account (e.g. admin, registered user, etc)

**location:** This will contain different locations that can be used on-campus where transactions can be completed. This is meant to provide an easy way for buyers and sellers to coordinate a meeting to complete a transaction.

1. loc\_id: Primary key location identifier
2. loc\_name: Name of location

3. loc\_coord: Coordinates of location

**message:** This entity exists to contain all the messages that are sent from one user to another. This will contain not only the message, but also the sender, recipient, and a time stamp of when the message was sent and received/read.

1. msg\_id: Primary key message identifier
2. msg\_item\_id: Item that the message is associated with
3. msg\_sender\_id: Account ID for sender
4. msg\_rec\_id: Account ID for recipient
5. msg\_body: Message body
6. msg\_meet\_loc\_id: Proposed location for meeting
7. msg\_meet\_date: Proposed meeting date
8. msg\_meet\_time: Proposed meeting time
9. msg\_time: Timestamp of message

**review:** This data item contains the reviews for all users. This entity will contain the review itself, the recipient of the review as well as the person who wrote the review, the time stamp of the review, and also the associated transaction/item that goes with the review.

1. rev\_id: Primary key review identifier
2. rev\_item\_id: Item that the review is associated with
3. rev\_reviewer\_id: Account ID for reviewer
4. rev\_reviewed\_id: Account ID for user being reviewed
5. rev\_time: Timestamp of review
6. rev\_rating: Rating given to user being reviewed (out of 5)
7. rev\_body: Review text body

### III Functional Requirements - Prioritized

#### A Priority 1

##### A.1 Unregistered Users

No.	Requirement
3	Unregistered users shall be able to register for an account.

## A.2 Registered Users

No.	Requirement
6	Registered users shall be able to do everything an unregistered user can do.
7	Registered users shall be able to create posts.
8	Registered users shall be able to contact the poster/seller.
11	Registered users shall be able to login to their account.
12	Registered users shall be able to logout of their account.
13	Registered users shall be able to request/reset their password if they forgot.

## A.3 Administrators

No.	Requirement
17	Admins shall be able to do everything a registered user can do.
21	Admins shall be required to approve posts before they can go live.

# B Priority 2

## B.1 Unregistered Users

No.	Requirement
1	Unregistered users shall be able to search the site for certain posts.
2	Unregistered users shall be able to filter search results.

## B.2 Registered Users

No.	Requirement
9	Registered users shall be able to edit and correct and/or delete their own post after it was submitted.

## B.3 Administrators

No.	Requirement
18	Admins shall be able to delete and edit posts done by any user.
19	Admins shall be able to contact any user.
20	Admins shall be able to ban users.

## C Priority 3

### C.1 Registered Users

No.	Requirement
10	Registered users shall be able to report violations of terms of service of another user.
14	Registered users shall be able to leave reviews of other users regarding completed transactions.
15	Registered users shall be able to propose meeting locations or modify location proposals to complete transactions.
16	Registered users shall be able to inspect their transaction history.

### C.2 Administrators

No.	Requirement
22	Admins shall be able to inspect any user's transaction history.

## IV User Interface Storyboards

### A Administrative Functions Use Case: Kobe

As an administrator, Kobe will need to approve or deny posts as needed and provide explanations for approval or denial (Figure 1). Before approval, Kobe will inspect each post to ensure that the posting follows the website's terms and conditions (Figure 2). In addition, he will be able to contact and ban users, delete and edit user posts, and inspect user transaction history. Priority 1 implementation shall be through MySQL workbench and/or MySQL command line interface. The following user interface storyboards illustrate a priority 3 implementation for administration through the website.

## B Purchase SFSU Apparel Use Case: Claire

Claire is purchasing SFSU apparel from other users. Using her laptop, she goes onto PurpleMarket and selects “SFSU Apparel” from the categories and browses the available listings (Figure 3). Once she finds the swimsuit, she views the item details (Figure 4), then attempts to message the seller for a swimsuit. The website then informs her that to message a seller, she must first register for a free account or login (Figure 5). Since she is not signed up, she must register (Figure 6). Once signed up, she is presented with a message page that allows her to message the seller (Figure 7) and the website tells her that her message was successfully sent (Figure ??). Once the transaction is completed, the website prompts her to leave a review.
